

Compare the range >

Multidefend >

Rotec multidefend steel doorsets combine unrivalled aesthetics with quality and flexibility to provide an industry leading product.

Multidefend doors are available in single and double doorsets with a large range of hardware, vision and ventilation options, in primed and factory finished power-coating. Side-panels and over-panels are also available.

The multidefend range is extremely versatile, and is suitable for any internal or external applications. It combines strength with elegance, durability and cost-effectiveness.

Firedefend >

The Firedefend is designed to provide the requisite fire performance with high-aesthetic qualities.

Single doorsets are tested and certified for six-hours' fire protection, and double doorsets are tested and certified for four-hours' fire protection.

The Firedefend range is suited to a variety of applications and designed to cope with general usage. They are available with either a side panel or over-panel, and can be fitted with ironmongery to meet the most demanding specifications. Fire-rated louvres and vision panels are also available.

Thermaldefend >

The Thermaldefend has been designed to reduce cold or hot transmission between rooms and the external element.

The Thermaldefend range has an estimated U-value of 0.6 w/m²k, and is available as single and double doorsets for internal and external use.

A wide range of ironmongery, over-panels, side-panels and vision panels are also available.

Woodgraindefend >

Rotec have carried out extensive research and development into this product to provide a door that is aesthetically very pleasing without comprising security.

The woodgrain effect which is available in any shade, makes it suitable for any application.

Available in single and double doorsets with a wide range of ironmongery, over-panels, side-panels, vision and louvred panels also available.

Securedefend >

All of the security doors we supply and install have been intensely tested independently by a third party achieving Security Rated certification to Levels 1, 2, 3 and 4 which comply with 'Secured by Design' standards.

The Securedefend range is a high-security solution which provides an aesthetic door appearance, designed with a choice of four grades to resist varying levels of threat and attempts at forced entry which are all available for personnel or escape use. Single or double doorsets are also available with a range of vision panels.

Marinedefend >

Specifically designed for use in swimming pools, corrosive or coastal locations. With a considered selection of zinc-coated, galvanised and stainless steel materials coated with a marine-grade colour finish, you can expect a considerably extended product life.

Rotec have achieved excellent protection in these types of locations. Standard powder-coated doors are vulnerable in these areas due to the porous nature of the material.

The Marinedefend door range is a competitively priced product that provides a doorset that is fit for purpose and which will avoid unnecessary future costs in repairing, repainting and even replacing due to damage and rusting of the door. Available in single and double doorsets with a wide range of ironmongery, over-panels, side-panels, vision and louvred panels also available.

Sportsdefend >

Rotec have carried out extensive research and development into this product to provide a door that can specifically be used in Sports Hall environments contained within Sports Centres and Schools where ball games and physical activity is taking place.

The frame sits flush with the inside face of the structure and rebound boards are fitted to the inside face to give a flush appearance with the adjacent wall and conceal the panic assembly and lever furniture. This overall assembly gives greater safety to the users of the hall and complies with the Sport England design and technical guidelines.

Sportsdefend doors are available as single or double doorsets with side-panel and over-panel options to suit a range of internal or external applications. They combine strength with elegance, durability, and cost-effectiveness.

Sounddefend >

The Sounddefend has been designed to reduce sound transmission between rooms and the external element, as well as providing sound privacy for sensitive environments.

It is available as single and double acoustic doorsets for internal and external use, with options for glazing and louvre ventilation.

The Sounddefend range has been tested to 50dB, and provides solutions to many applications with it meeting the high standards required by environmental and local authorities.

A wide range of ironmongery, over-panels, side-panels and vision panels are also available.
